

Chapter 19.70 AOZ AIRPORT OVERLAY ZONE

19.70.120 Transitional zones--Established.

Transitional zones are hereby established as the area beneath the transitional surfaces. The surfaces extend outward and upward to ninety-degree angles to the runway centerline and the runway centerline extended, at a slope of seven feet horizontally for each foot vertically from the sides of the primary and approach surfaces to where they intersect the horizontal and conical surfaces. Transitional zones for those portions of the precision approach zones which project through and beyond the limits of the conical surface extend a distance of five thousand feet, measured horizontally from the edge of the approach zones and at a ninety-degree angle to the extended runway centerline. (§ 1 (part) of Ord. passed 8/22/84: prior code § 22-30A-7)
